

How The World Ended Millennia Ago: A Journey Through The Catastrophes That Shaped Our Planet

The Earth has a long and tumultuous history, marked by a series of catastrophic events that have shaped its landscape and its inhabitants. From the asteroid impact that wiped out the dinosaurs to the volcanic eruption that triggered the Bronze Age collapse, these events have had a profound impact on the course of human civilization.

In his new book, *How The World Ended Millennia Ago*, geologist and author Dr. Brian Fagan explores the evidence for these cataclysms and their impact on human history. Drawing on a wealth of scientific research, Fagan provides a vivid and compelling account of these events, from the initial impact to the long-term consequences.

One of the most well-known catastrophes in Earth's history is the asteroid impact that wiped out the dinosaurs. Fagan provides a detailed account of this event, from the initial impact to the global wildfires and tsunamis that followed. He also examines the evidence for the impact's long-term consequences, including the extinction of the dinosaurs and the rise of mammals.

Another major catastrophe explored in the book is the volcanic eruption of Thera, which occurred around 1600 BC. Fagan argues that this eruption was responsible for the collapse of the Minoan civilization on the island of Crete. He provides evidence for the eruption's widespread effects, including the destruction of the Minoan capital city of Knossos and the dispersal of the Minoan people throughout the Mediterranean.

In addition to these well-known catastrophes, Fagan also explores a number of other events that have had a significant impact on human history. These include the Younger Dryas cooling event, which occurred around 12,000 years ago and caused a dramatic drop in global temperatures. Fagan also discusses the Black Death, a plague pandemic that killed an estimated 30-60% of the European population in the 14th century.

How The World Ended Millennia Ago is a fascinating and informative book that provides a unique perspective on the history of our planet. Fagan's clear writing and engaging storytelling make this book a pleasure to read, even for those with no prior knowledge of geology or history.

If you're interested in learning more about the catastrophic events that have shaped our planet's history, then I highly recommend *How The World*

Ended Millennia Ago. Fagan's book is a valuable resource for anyone interested in the history of our planet and the impact of natural disasters on human civilization.

Praise for *How The World Ended Millennia Ago*

"A fascinating and informative book that provides a unique perspective on the history of our planet." - **Kirkus Reviews**

"Fagan's writing is clear and engaging, making this book a pleasure to read, even for those with no prior knowledge of geology or history." -

Library Journal

"A valuable resource for anyone interested in the history of our planet and the impact of natural disasters on human civilization." - **Booklist**

About the Author

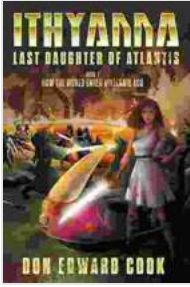

Dr. Brian Fagan is a geologist and author who has written extensively about the history of our planet. He is a professor emeritus of anthropology at the University of California, Santa Barbara. Fagan's other books include:

- *The Little Ice Age: How Climate Changed History*
- *The Great Warming: Climate Change and the Rise and Fall of Civilizations*
- *Floods, Famines, and Emperors: El Niño and the Fate of Civilizations*
